COMP2003 Computing Group Project

Digital Compliance Logbook Website

A web-based system for completing, managing and monitoring Friary Mill's safe and legal compliance checks.

Project Overview

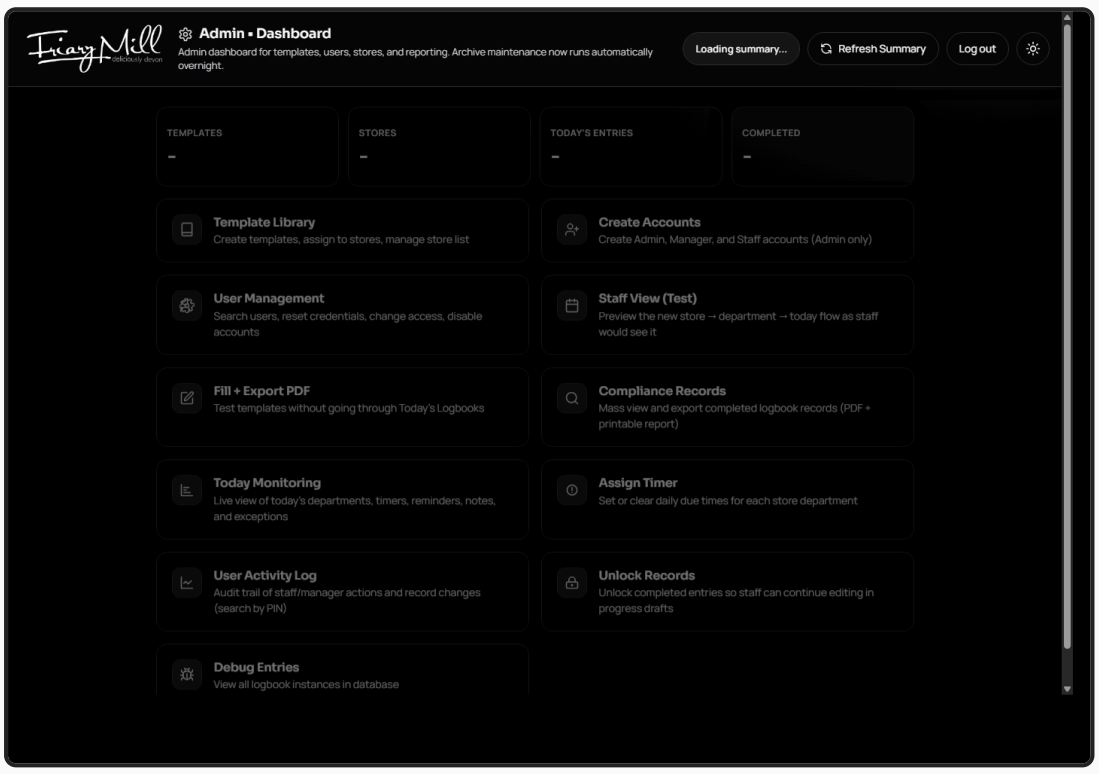
Friary Mill currently uses paper-based logbooks to record food safety and health and safety checks. The aim of this project was to design a digital alternative that is easier for staff to use and simpler for managers to monitor.

The website provides different areas for admins, managers and staff, so each user type can access the tools they need.

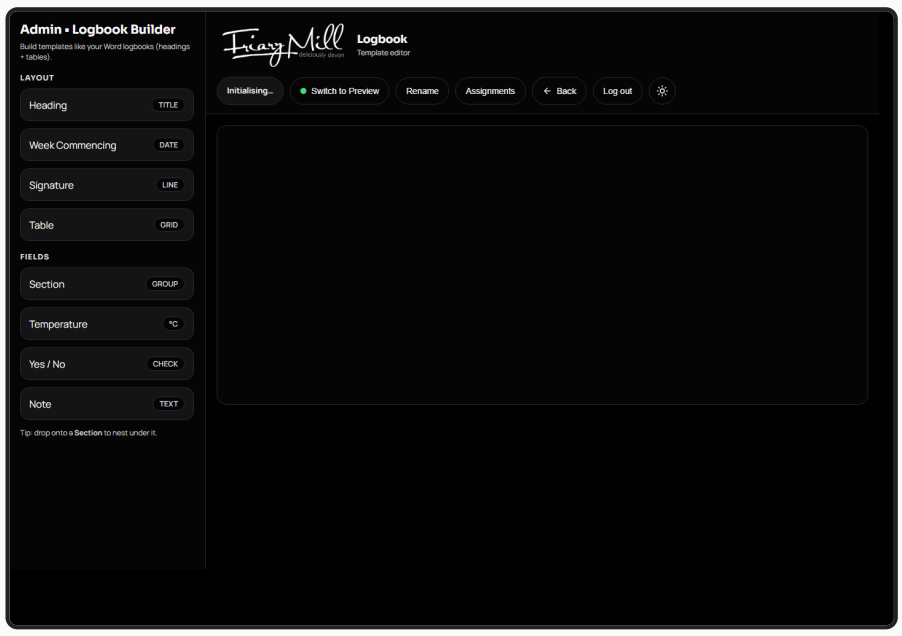
Main Objectives

- Create and edit digital logbook templates.
- Assign checklist sections to stores and departments.
- Allow staff to complete daily checks using a PIN login.
- Allow managers to view completed records.
- Reduce reliance on printed paper logbooks.

Website Screenshots



Admin dashboard with template, record, monitoring and user management links.



Logbook builder used to create sections, fields and checklist items.

User Roles

Admin

Creates users, templates, stores and departments.

Manager

Views records and monitors department progress.

Staff

Completes daily logbook checks using a simple PIN login.

Key Features

Template Builder

Create headings, tables, yes/no checks, notes and temperature fields.

Today Monitoring

Track which departments have completed their checks.

Compliance Records

View saved logbook entries and previous records.

PDF Export

Export completed records for evidence or printing.

Benefits

Less Paper

Reduces the need for printed compliance logbooks.

Easier Tracking

Managers can find and review records more quickly.

Clearer Workflow

Each role has its own area of the system.
